The analysis by John Manley, a former deputy prime minister, suggests the government could raise almost \$6 billion and cut income taxes by \$2.9 billion. The federal government and the provinces have jointly agreed to index both measures to inflation over the next three years. That means any savings will accrue to the federal government, not the provinces. Manley, an assistant professor at the University of Ottawa, estimates that the tax cut would cost the federal government about \$500 million a year. "For the federal government, this will add between \$1.8 and \$3.2 billion to revenues over the next decade," Manley said. He says there is no reason to limit the tax cuts to families with children, because Canada needs "to invest in child care." "We know that a single parent with two children can't work as much as a family with two parents and two children," he said. Manley's analysis, released by the Canadian Centre for Policy Alternatives, looked at projections that the Liberals are expected to announce in their 2015 fall economic update. In the last fiscal year, the provinces, which are responsible for health care and education, raised taxes on income, corporate and property income. A key argument for allowing parents to access the child care and seniors tax benefits is that it would free up money to be spent on programs such as child care, health care and education. Manley's analysis shows that cutting taxes on the middle class will cost the federal
