What's New in the Windows Package Manager?

Windows Package Manager offers users a convenient way to install and update freeware, proprietary software as well as to create and edit

databases of their favorite software. Using this application (Windows Package Manager Client), users can install any single piece of software using the included installer. Windows Package Manager Features: Download requested software from the Internet. Install or update a requested software using an included installer. Control all processes of the client. Browse the download folder and press the buttons to install and update packages. Create an own database of installed and requested packages. Select which files to install/update when installing or updating. Close all unnecessary windows at the end of the software installation. Remove all packages from the client without removing the packages from the current database. Add, edit or delete items from the current database of packages. The Windows Package Manager Client / Windows Package Manager Server do not require any installation, all that is needed is a connection to the Internet and you are ready to

go. When installing one software from the Windows Package Manager Client you can select the files you want to install/update and the installed/updated files will be automatically added to your database. When you want to update the same software you can choose to update the same version or the latest version you can choose to. You can download the Windows Package Manager Client from: Advertising
INSTALL • Windows Package Manager Server • File Database Builder v1.1 • Secure-Copy • Pop-Up Remover • Windows Package Manager Client / Windows Package Manager Server • Firefox Enhanced Plugin • Extensions
