all other information the password was used on, and even from backup files. The program can search for the password in hidden files and databases. You can also use it to search for the password in images, documents, HTML, Microsoft Office Word files, and other formats. Hidden passwords are not recoverable, even if all data on the drive is lost. Hiding is virtually impossible, even if you try to recover a password. If you do not have enough time to properly back up data, or you have information that you want to hide, you can use Password Safe Portable to hide all the information the password was used on, and you will be sure that no one can ever see it. You can use it to hide any kind of information on a hard drive. Password Safe Portable hides passwords in folders, in Microsoft Office Word documents, in the registry, in Excel files, in images, in HTML files, in ZIP archives, and in databases. With Password Safe Portable, you can hide any kind of data in any format, from any kind of media, even if the media is attached to a removable device, a network drive, a database file, or a CD/DVD. It automatically detects and handles most media types. Password Safe Portable uses the most modern techniques in file hiding, so if your computer system has been cracked and your data is being revealed to the world, you will be safe. File hiding is a very safe process. No one can recover the information in its hidden form, even if they obtain the original file and try. The best thing about file
