I have a few free-form activities that I would like to move into a single "Activity Post" custom post type - this is for reasons of custom re-usability (across multiple sites) and cleaner navigation. The way this is done with the BuddyPress activity system works by having a defined set of activities and your posts are related to a particular activity. However, I'd like to allow free-form links so that the user can mention other sites as well as saying what they did there. Since activities are created with the activity system I can't create a post and then add them as a BuddyPress activity. I can't move them to another type of post as they have parent-children relationships that don't allow me to move them to a different post type. Is there another way of doing this? Perhaps a plugin that will allow me to create a post that can be called an activity as well as allow me to tag the other sites? A: Check out Fielo: Good old Fielo has a free plugin that does just that: integrate a "Link to page" into your custom post types. We use it for this in several blogs and it does exactly what you want. Linking from one page to another, and from one post to another, we think it works great. This plugin is for non-WP7 and only works with Custom Post Types and not with Post Types. You could use it or get it from this link. EDIT: Fielo recently announced that they will add WP7 compatibility as well (via Codepress). Fielo WP7 Plugin - (updated July 2011) Fielo also has a plugin for

Xmas has the same tone than the Ambient DM DLC! About Ambient DM : Ambient DM is an action game with graphics designed to contrast the dark, harsh landscape of Hack & Slash. Ambient DM is a game about survival. You

find yourself in a destroyed place, every day you must decide which of your actions will keep you alive. A world full of mystery, rich in lore and hidden secrets. Ambient DM does not follow the structure of the classic Diablo experience. It's an action RPG, inspired by Noby Noby Boy and Dark Souls. Stay tuned for more updates.... What's new:

is Just Beginning December 26th, 2005 The final DLC is on the way this week. I know I promised this in the last post but I'm delivering a bit late. However, there is tons to say so I will go for it. You might have heard before the announcement that I had the "Ambient moods 1 and 2" DLC and that this was the "Christmas tree" DLC. I had a reason for this. I wanted to keep alive the "Xmas feeling" but produce a new Christmas sounds. So in addition to the Ambient moods, I'm releasing the other Ambient Mood as they are:1. Field of the Invention The present invention relates to an arrangement of $R.sub.j$ (j=1, 2) through $N.sub.j$ (j=1, 2) that are analog switches for maintaining consistency of a resetting timing. 2. Description of the Background Art Each bit D, D of a digital word of n bits is reset, when a given resetting timing (reset timing hereafter) is exceeded, to a logic level "0" by a reset pulse R that is square-wave clock-pulse shaped. FIG. 12 shows a conventional technique of a conventional resettable memory device and a timing chart for an example of a "0" and "1" combination of digital data. In the conventional technique, resets are made following D/A conversion circuits FD and FD, a parity check circuit PC, and the like in column direction, and data pattern positions are timings at which reset is made. As illustrated in FIG. 12, upon detection by a given bit D of rise of R that is a reset pulse of logic level "0" and a rise time that is longer than a constant time $T.sub.RK$ a word line driver

(not illustrated), which is located at a preceding side of a sense amplifier (not illustrated), is switched on. As a consequence, a capacitor C is charged to a voltage V.sub.B, which is the voltage of the power supply potential. When R falls and a charging current starts to discharge to thus cause a discharge curve to rise, the voltage V.sub.B reaches a voltage V.sub.K that is a predetermined voltage higher than the power supply voltage (V.sub.CC). By this initial voltage V.sub.K, D is inverted to a logic level "1" that attains a power supply voltage V
