Run the CD inside your autocad. Double click on Autocad.exe  
Click on the Preferences Click on Autocad > Preferences. Click on Autocad Keygens.  
Now a window appears saying "Keylgens already in registry". Do not worry, you can just close it. Now you must register the Keylgens.  
Click on Autocad > Preferences > Autocad Keygens > Enter the Keygens

that you want to use. Make sure you replace the keygens with your Keylgens. Now you should be good to go.

A: I would use the Autodesk Activation CD and let Autocad activate itself. That way you do not need to worry about a keygen, and it is a lot easier to use. There are probably Autocad keys if you have multiple computers you could register with and activate multiple copies. That would be the better solution, if you could

use them. 1. Field of the Invention This invention relates to a process for the preparation of polymers, and particularly copolymers of ethylene and other alpha-olefins. More particularly, this invention relates to a novel catalyst composition for the preparation of ethylene/alpha-olefin copolymers with improved properties.

2. Description of the Prior Art Commercial polymers of ethylene

---

are typically prepared in a gas phase process utilizing a catalyst such as a chromium oxide or vanadium oxide. Recently, the use of a titanium compound supported on silica as a catalyst for the preparation of ethylene polymers in a slurry process has been disclosed. The supported titanium compound is usually prepared by contacting titanium tetrachloride with anhydrous silica gel and then reducing the

---

titanium chloro complex to a form suitable for use in the polymerization process. The supported titanium compound is contacted with the catalyst and a trialkylaluminum cocatalyst such as trimethylaluminum and a vanadium compound such as a vanadium halide or an organic vanadium compound such as an alkyl vanadyl halide to provide a catalyst composition. The supported catalyst is

---

then employed in a solution polymerization process wherein ethylene and one or more comonomers are polymerized in the presence of hydrogen to form the ethylene/alpha-olefin copolymer. As previously indicated, the supported titanium catalyst system has now been utilized in a
