Note: This page was last updated on January 19, 2020. AutoCAD is one of the best-known and most used software applications in the architectural design, engineering, and manufacturing industries. The program is often used to create blueprints, engineering drawings, and technical schematics. It is a desktop-based program that does not require an internet connection to use, and is not platform dependent (that is, AutoCAD can be run on any PC-compatible operating system with a supported graphics card or video adapter). There are two versions of AutoCAD, one for AutoCAD LT users and another for AutoCAD subscribers. AutoCAD LT 2020 and AutoCAD LT 2020 User License Agreement AutoCAD LT 2020 - the non-subscription version of AutoCAD - is available as a free download from the Autodesk website, and can be installed on only one PC. While AutoCAD LT 2020 can be used by the general public, the free version of the software cannot be installed or used by individual entities. It must only be used by an employer or organization. The free version of AutoCAD LT 2020 can be downloaded from the Autodesk website. The user agreement that accompanies the download and installation of the free version of AutoCAD LT 2020 states: "The free version of AutoCAD LT 2020 is for use by an employer or organization for the purpose of facilitating drafting activities. Such usage includes, but is not limited to, designing new buildings, revising existing drawings, creating artwork, and providing technical and support services to the client." Structured drawing elements Structured drawings that are in the.dwg format contain drawing elements that define a layout for the drawing. These elements include text, line, polyline, circle, ellipse, textbox, and arcs. Text Text is the most important structure element in the drawing. It can be a single character or any sequence of characters. The text string itself is stored as a string in the textbox. The text string in the textbox contains two components: the string itself and information about its font, font attributes and color. The text string is called the content string. The font name is called the font family. If the font is not specified in the drawing, AutoCAD assumes the default font family. The font attributes define the font features. The font color can be either a color or a name of a color. Line Line is the simplest and most commonly used structure element. A line is defined by two vertices, or points, and a direction. The direction determines whether the line is horizontal, vertical or diagonal. The vertices determine the location of the line. Polyline Polyline is a combination of lines. A polyline consists of a sequence of horizontal or vertical lines. When two or more polylines are connected, they are treated as a single continuous object. The figure below shows an example of a polyline with 3 lines: Textbox Textbox is the most basic of drawing elements. It is a container for text that is placed in the object space. Textboxes can be used as a sign to mark a point, as a path, or for text. Textboxes have a string called content that is inserted when the textbox is created. Arc Arc is a set of straight lines joined together at a single point. It is defined by an angle of rotation and a pair of vertices. The vertices define the location of the arc. Connection A connection is defined by two or more lines. A connection can be a path. A path is a combination of line segments. Connections are used to draw a box, a shape or an object that overlaps other drawing elements. There are four kinds of connections, depending on the nature of the lines and shapes that they

connect: A closed connection is defined by two line segments. An open line segment is defined by a single line segment. A closed path is a combination of line segments. An open ca3bfb1094
