About this Album This record is 100% original. It contains all the music that was used in the movie.. Quentin Tarantino's Jackie Brown is a 1997 action film starring Samuel L. Jackson, Uma... The soundtrack to Quentin Tarantino's 1997 Jackie Brown is the third soundtrack by the.Q: Calling a method from from a different view controller with different arguments I have 2 view controllers but they are both using different UIViews but some of the functions from one view are called in the other. I've created a segue between the view controllers but my issue is when I click a button to go to the 2nd view controller, I want to be able to call the method in the first view controller with the arguments that are on the 2nd view controller and when I click the other button

to go back, I need to do it in reverse. How can I do this in swift 4? A: You need to add two buttons to the first view controller and connect them to the segues in the storyboard. Add a new segue between the first view controller and the second view controller. In the Attributes Inspector, make sure the segue is set to Show and not Modal. Then add two IBOutlets in the second view controller: @IBOutlet weak var secondViewController: UIView! @IBOutlet weak var otherButton: UIButton! Then, in your viewDidLoad() method of your first view controller, add two buttons in viewDidLoad() and connect the segues: @IBAction func goToSecondViewController(sender: UIButton) { let secondVC = SecondViewController() secondVC.otherButton.addTarget(self, action: #selector(goToFirstViewController), for:.touchUpInside) segue.perform(segue) } @IBAction func goToFirstViewController(sender: UIButton) { let firstVC = FirstViewController() firstVC.someArgument = 2

firstVC.someButton.addTarget(self, action: #selector(goToSecondViewController), for:.touchUpInside) segue.perform(segue) } Then, in your view
