You can see that it picks the first four words in the "Les Femmes De L Ombre" phrase. I want to replace this four words (4th word in.rst) with the following predefined name: Vicky Cristina Barcelona: alonsa HD 1080p x264-1.1.0 CREEPl A: For some reason "__app_name_: _" is not on your list. What you should do is make the "__app_name_:" part of the word and make it a separator. You could separate with "\s+" (for 1 or more characters) or " -" (for zero or more characters) like this: __app_name_:\s+([\S\s]+?)\s+ ^^ Then replace with: $1 Regex101 Demo Q: How to post Entity / Object to server while using HttpWebRequest I have a requirement to update a file in a server while using a HttpWebRequest POST method. The request should include an object or entity like below How I can send it correctly? Thanks. A: Here's one way of sending your Request, you need to create a class instance that represents your object. public class User { public string UserName {get; set;} public string Password {get; set;} } public void Upload() { string url = ""; User u = new User(); u.UserName = "joe"; u.Password = "sexy"; WebRequest wr = WebRequest.Create(url); wr.ContentType = "application/x-www-form-urlencoded"; wr.ContentType = "application/json"; wr.Headers.Add("myheader", "myvalue"); u.UserName = "joe"; u.Password = "sexy"; StreamWriter writer = new StreamWriter(wr.GetRequestStream());
