Extension vs. Compatibility mode Although AutoCAD Crack For Windows is only 32-bit, it may be installed on 64-bit platforms. The installation of AutoCAD on a 64-bit platform requires a separate installation of the AutoCAD 32-bit runtime components. Extension mode (x86) is used for 64-bit platforms. Compatibility mode (x64) is used for 32-bit platforms. There is no x86 compatibility mode for 32-bit AutoCAD. The difference between extension and compatibility mode is that in extension mode, AutoCAD runs on 64-bit platforms, and in compatibility mode it runs on 32-bit platforms. The effect of running the software in extension mode (64-bit) on a 32-bit platform is that AutoCAD will behave like 32-bit AutoCAD, and will not take advantage of the additional memory in the machine. Because of this, it is recommended that AutoCAD be installed in extension mode. The compatibility mode includes basic drawing tools, but has limited functionality for some programs (printers, for example). The installation options are listed on the AutoCAD product screen. Once installed, AutoCAD can be used as either a 32-bit or 64-bit application. AutoCAD 2018 and later may be installed and run in 64-bit "extension" mode. This mode is available as an option on the main screen of the application. A 64-bit AutoCAD installation does not require the separate installation of AutoCAD 32-bit runtime components. Autodesk does not offer compatibility mode for Windows XP. For compatibility with Windows XP, there is a free product called AutoCAD For XP. AutoCAD For XP is a 32-bit only application which can be installed and run alongside the original AutoCAD. AutoCAD For XP is based on older AutoCAD releases, but includes compatibility with most features. Recent versions of AutoCAD also include a 64-bit compatibility mode for Windows 7 and Windows Vista. In 64-bit compatibility mode, AutoCAD behaves as a 32-bit application. AutoCAD has been updated to include 64-bit compatibility mode for Windows 7 and Windows Vista. A 64-bit program cannot run directly in 32-bit compatibility mode on 32-bit Windows platforms. In order to run a 64-bit program in compatibility mode, Windows first converts the file to a 32-bit file, and then af5dca3d97

The U.S. Supreme Court on Monday appeared poised to hand the administration a major victory in President Donald Trump's campaign to limit immigration from Muslim-majority countries. By a 5-4 vote, the court is set to allow the Trump administration to block immigrants from six countries — Syria, Iran, Yemen, Somalia, Libya and Sudan — for 90 days while the administration reviews visa and asylum cases. The court's order keeps lower courts from ruling on whether the ban is an illegal attempt to discriminate against Muslims. Justice Sonia Sotomayor noted that the justices were voting on an emergency motion to stay a lower court order that would have halted the ban. She said she was concerned that the lower court order "may cause irreparable harm to individuals in those countries." In the end, the court voted 7-2 to accept the administration's request for a stay. The Trump administration says the ban is necessary to prevent terrorists from entering the country. In the ruling, the justices cited evidence that the travel ban helped thwart a series of attacks in the U.S. after the Sept. 11, 2001, attacks. The justices rejected the Obama administration's arguments that the ban was overly broad and, as a result, could be used to target U.S. residents for discriminatory reasons. The court is set to hear oral arguments on April 25, in what promises to be a blockbuster case that could reshape the court and the nation's immigration policies. The justices are being asked to decide whether the administration is using a "Muslim ban" to discriminate against a particular religion. On the other side, the administration says it's only targeting nations with inadequate screening of applicants
