Research the truth about what took place on the night of the murder. Feeling that her life is no longer her own, she joins an all-female revolutionary organization led by the renowned Katia Shriver. A timely reminder of what it means to be a woman in the modern era. Gordan Srebotnjak's two-and-a-half-hour epic is the most lavish Serbian film since Niko Dabovic's Terminator (1991). Here, the actor cast as Draga gives one of his best performances, portraying a caustic job seeker in the 1990s. Svetozar Markovic's directorial debut offers sensitive characters and dynamic visuals in its harrowing look at the rise of the new Serbia. Shorter than most Hollywood productions, Slanic boasts

remarkable visual imagination and a powerful sense of place. Its principal performances are treated with exceptional sensitivity. The rise and fall of the charismatic Josip Jovic, the 7th president of Serbia, has all the ingredients of a television miniseries: multi-generational drama, political corruption, an impulsive young president and a murder that is the backbone of the story. Plenimir Djelic's multi-layered plot is more than just an absorbing TV show, however. It is also a rumbling social commentary that raises critical questions about the future of Serbia. Justin Timberlake's The Tennessee Williams Musical "Lion, Oranges, and Blue" is based on the poet's winning the Pulitzer Prize for his poetry, rather than his best selling play. 10 year-old Leo (Nicholas Bailey) is a happy-go-lucky kid, his only real "problem" being his father (Alastair Sim) obsession with winning them a billion bucks playing "The Lotto Game.". Comparison of the concentration/response relationships of dexmedetomidine and remifentanil for the loss of the second toe pulp to toe pinch reflex in rabbits. Dexmedetomidine (DEX) is often used as an alternative to anaesthesia in animals for complementary and alternative medicine. The present study aimed to compare the concentration/response relationships of DEX and remifentanil (REM) for the loss of the second toe pulp to toe pinch reflex in rabbits. Twenty male Japanese white rabbits with a mean weight of 3.14 ± 0.05 kg were included in this study. The rabbits were anaesthetised with 2% isoflurane in oxygen. All rabbits received DEX or REM (2.5, 5 and 10 $\mu\text{g}/\text{kg}$) ($n=10$) or DEX (5 $\mu\text{g}/\text{kg}$) plus DEX (0.2, 0.4, 0.8, 1.6 and 2.8 $\mu\text{g}/\text{kg}$) or REM (5 $\mu\text{g}/\text{kg}$) plus REM (2.5 $\mu\text{g}/\text{kg}$) ($n=10$). Tourniquet (Jamar) pressure was maintained at 20 mmHg for 120 min.

The withdrawal reflexes of the second toe to toe pinch (D2T2T) were evaluated every 20 min and then every 40 min until a reflex was no longer detected in each
