I have a number of folders that I want to rename. I want to create a batch file that can loop through the folders without overwriting files. A: You can add some simple DOS commands in your batch file, like: FOR /D %%f IN (C:\Subfolder*) DO (rename "%%f" "New name %%f") For more information about the for /D command, see the FOR /? command. In recent years, the amount of heat generated by electronic equipment is increasing due to miniaturization and high-speed of the equipment. Therefore, technologies for miniaturizing heat sinks are in demand. Heat sinks having three-dimensional structures are known in the art, for example, as shown in FIGS. 1 and 2. In these examples, the heat sinks are of wedge shapes to which fins are fixed, which form cooling fins. As shown in FIGS. 1 and 2, a heat sink which has a heat receiving portion 3 and a base portion 1 is formed with a U-shaped cross section in which the heat receiving portion 3 is bulged on a base portion 1. In the above heat sinks, each portion, i.e., the base portion 1 or the heat receiving portion 3, is made of a predetermined shape and formed in a predetermined shape as a whole. Therefore, in designing the heat sink as a whole, the shape and the dimensions of the base portion 1 and the heat receiving portion 3 are designed and fixed, and subsequently the shape and the dimensions of each fin are designed and fixed. Therefore, it is difficult to perform the design of the heat sink such that the effect of the fins is maximized within a restricted space. Furthermore, this design method makes it difficult to control the capacity of the fins, i.e., the amount of heat absorbed by the fins, and the heat dissipation efficiency. In recent years, high-efficiency and high-output heat dissipation has been demanded. In this regard, the amount of heat absorbed by the fins is increased. Furthermore, in order to increase the capacity of the fins, increasing the fin length, thickness or width is required. However, the dimensions of the heat 6d1f23a050
