May 10, 2016. Learn English the easy way with ClassZulu's English books for kids learn, chat, and practice speaking english in. Association of CD44 with internalized CXCR4 is required for transendothelial migration and arrest of human T cells in inflamed venules. In this study, we describe the role of CD44 and CXCR4 in the migration and arrest of leukocytes in inflamed venules in vivo. When compared with wild-type mice, mice expressing human CD44, but not human CXCR4, were severely impaired in their ability to migrate in response to TNF-alpha into inflamed venules. Mice expressing human CD44 and human CXCR4 showed a TNF-alpha-dependent homing of mouse CD4(+) and CD8(+) T cells into human brain microvascular endothelial cell monolayers in vitro. When studied in the mouse brain, human CD44-expressing T cells accumulated at the brain surface, where they arrested and rolled, but never transmigrated, whereas human CXCR4-expressing T cells rapidly rolled but did not firmly arrest. Finally, in human cell-based adhesion assays, both T-cell CD44 and CXCR4 were necessary for firm adhesion to human brain microvascular endothelial cell monolayers, and for adhesion to human endothelial cells under flow conditions. These studies c6a93da74d
