Adobe's Lightroom 5 is certainly an improved lightroom, so why not enjoy the new features especially Lightroom mobile and Lightroom CC? It's essentially the Lightroom 5 program with mobile apps and cloud storage features added. Lightroom mobile is becoming a dedicated app on your smartphone. This version has new sync features, including new geotagging. Lightroom CC gives you the tool to take photos and videos, manage all of your files and access files stored in the cloud. To view your photos on mobile devices, you can display the pictures in the app or pull up the full pictures file on a mobile device. Since I am personally very excited with this new version and all it has to offer, I've decided to attempt to do this article along the lines of Delivering Lightroom 5 into your hands. To this end, in the introduction I am going with a brief demonstration of the new features in Lightroom 5 while excluding any basic and perhaps less interesting aspects of the software. Then, after introducing a group of new features, I will take a closer look at those. Next up, I'll talk about user experience and performance issues and wrap-up by introducing Lightroom's new licensing program. The update to Lightroom 5 occurs automatically, so I am sure as it is being introduced to me I may find a couple of bugs on the first go. There are quite a few new features in this release, but Lightroom Mobile is more accessible than ever and its sharing options now include a couple of useful new features. While Lightroom has for several years been able to share blocks of text, or clippings, via a service called Lightroom Web, this is now updated to include clippings for any Live Photo files.

Lightroom Web makes it easy to share images and fact sheets through a dedicated mobile app on any connected mobile device that runs Android or iOS. This version of Lightroom 5 also has a share button for external images. To make it easy for you to create and share files online, Lightroom CC also has an option to securely upload images to a private gallery.

"The version of Photoshop that you use today is the most flexible platform for

creating, designing and publishing any kind of content, from photography and illustration to video and animation, to social media and beyond. With the future of the industry moving towards AI and to experts who are able to use tools to augment their creativity, we wanted to create something that promised to increase the productivity of the user - that in turn would increase the quality and innovation of so much work. In order to do that we developed Sensei, a powerful AI that augments the creative capabilities of the users," said David Dykes, Senior Vice President, Adobe Creative Cloud. "Adobe Sensei is the most sophisticated technique we've seen in a consumer product to date that truly augments creativity. Users of Photoshop are used to getting better results with every upgrade and it is simply amazing how much sensei will help improve the quality of the image you are working on. And what Sensei doesn't know, it can learn, so if you are using it in a very creative way, it can also learn. We see this technology not only as being a powerful tool for the user, but as a very valid approach to creative discovery; with Sensei, it's possible to produce work that you simply could never have created without it. In a way, it's the best, ever, Photoshop," said Dykes. The newest edition of Adobe's flagship photo app, Adobe Photoshop, introduces a number of key new features that take advantage of technology developed by Adobe to signal the advent of AI in creative workflows. The new features set the stage for the future of AI and creativity, bringing AI to the heart of Photoshop for the first time.
