If you take a look at the changes and updates in the Lightroom titles, I don't see any improvements in performance—they seem to have adopted the same macro scripting concept as Adobe Photoshop. Of course, it's very difficult to generalize, but a lot of the other reviewers reported that the updates have no impact on the performance of Lightroom. Adobe aftershave, as long as it's a quality product, is one more clichéd reference, but necessary truth that remains as true today as it ever was. Adobe Stuff is not about Apple Stuff, it's about Adobe Stuff. There is a solution, of course, for those who want it (and it's well worth the price), and we're fans of it and hope to promote it. For most, however, they can avoid it if they're prepared to be a little bit disappointed. You don't have to be a Mac user to write software for OS X. But it lacks the state-of-the-art features the company itself chose each time, so you can hardly blame it for that. And even though it uses a less demanding framework, it still requires physical power. So don't forget to include the right RAM in your budget.
