Keymacro allows you to create macros in MS Word and then run them automatically on selected or all of the open documents. Each macro must be created in a different file. You can execute only one macro at a time. If you need to run more than one macro on different documents, you must do it manually. The best solution is to save them as a shortcut, which can be run by double-clicking it. Keymacro is a real time saver. Macro Builder Description: Macro Builder is an easy to use macro builder for Microsoft Word that lets you create a macro. This allows you to make macros that run when you press a keyboard shortcut or when you execute a menu command. A lot of the words of the macros are defined by the buttons on the toolbar. For example: pressing a button inserts a text from the clipboard. The other buttons are used to change text, make text bold, highlight text, or apply conditional formatting. Macro Builder allows you to perform different operations: making text bold, highlighting text, applying conditional formatting, creating a hyperlink, and inserting pictures and tables. You can customize the buttons on the toolbar by using this simple wizard, which lets you choose the color and icon of each button. The other options are available by selecting "Customize this macro". You can create separate macros for each document and choose whether to run or not to run a macro. You can use the mouse to drag and drop the macros into a list of your files. You can also display the list of files on the toolbar or display it on the status bar, so it is always in front of your eyes. What's New in the?

Portable Storage Explorer is a simple-to-use software application that fetches information on removable devices on remote computers, such as USB, CD-ROM and DVD-ROM. It comes packed with an intuitive set of options that can be figured out by all types of users, even the ones with limited or no prior experience with networking utilities. Contrary to what its name implies, the app is not portable; the word simply refers to the fact that portable device data is taken into consideration for processing. Installing the tool takes little time and minimal effort. As far as the interface is concerned, the main application window has a simplistic layout and shows all options, so there are additional, hidden ones that can be found here. All you have to do is specify the remote PC's IP address, and either log in with your current credentials, or administrative user name and password. The scanning procedure starts with the click of a button, and the shown information can be copied to the Clipboard by using the global hotkey or opening the context menu. Portable Storage Explorer runs on a very low amount of CPU and RAM, so it does not affect the overall performance of the machine. It finishes a scan job pretty fast. However, it popped up errors and exited on multiple occasions during our evaluation, right after clicking the scanner button. Users should resort to more stable software program for finding out removable device data from remote machines. Rating: Download PC StorageExplorer!
