When it comes to the creative workflow, the Apple iPad Pro has changed the game completely. No need for the expensive desktop/laptop anymore, and it can fit into your pocket whenever you need it. But not everything belongs in your pocket, so this means a lot of work when it comes to processing and archiving your digital work. Lately we've been thinking about and purchasing Apple's iPad Pro, but were hesitant to go all-in at the high price. Adobe's new Photoshop software certainly fits the bill and we had a very pleasant experience with it, especially when we included it into our workflow. Thanks for the short review. I have been using Photoshop on a weekly basis since CS2, when it became my goto graphics tool of choice. (Before that, it was Painter, then Photoshop 3.) In fact, it was the Photoshop 4 version that I introduced to my brother, who had used Painter previously, and he too loved it. Thrilled to hear that you liked Photoshop 2016. I strongly encourage you to give it a test drive to see if you feel it meets your needs. If it does, I would strongly urge you to download it and give it longer than a fly-by first impression. And you can always download the Express version, and consider upgrading to the full version later. Thank you very much for testing the new software, and your review. I am told that sometimes the quality of a review article is enhanced when a personal connection exists between the reviewer and the publisher, or simply because we are passionate about our work and products.

More and more professional photographers are replacing film with a workflow that involves not only shooting RAW, but also merging various camera shots and frame adjustments to create a high-quality image. Whereas today Photoshop has over 100 channels in a tool, in the next version it's going to shrink to 10 – a convenient number for use with the new and already popular Array Channel feature. Chromatic Channel is also going to make an appearance in the next version, and it's one of the most popular activity. Since version 20.1, you can switch between channels right from the command bar. In order to work like the colour temperature chip in a camera, to make the work more fluid and simplify it, you can also set the clip as a number of red, green, blue, or specific colours. Another feature that has been increased is the ability to use gradients in your recolored work. Besides the regular channels, Adobe is also going to play with a few more *new* channels. Dust – which is basically the product of dirt and dust particles – is going to be one of the new channels for masking and keeping things compact. There are going to be possibilities to create a UV channel, which is going to allow highly detailed and textured meshes to be worked upon. Another interesting channel is going to be photo taggers, which will save you time on labeling your shots. It's going to be a great help when you get photos with hundreds of files and have to tag them. Right from where the Snap tool comes from, the feature that flows opens your image with the most recent version from the source. You can also scale your edges to fit into the cell, which is usually the behaviour of Adobe Premiere Pro. Overall, the long list of enhancements in the macOS version includes a new Perspective Warp feature, which helps you correct perspective for

better presentations, and another panel has been included to manage your layered setting.
