I'm using CS6 at work and find her to be a very weak version. I use LR to work with it and it's good, but I hate LR5 and I don't remember the app she sends photos in working like this. I had to open them in PS just to do a simple edit. PS is a good tool for doing graphic design. I handle that in my other program, InDesign. For photographers, the most annoying part of working with PS is that everything that inspires you to do something creative is an explicit process. All the creative decisions are made on the common, rigid platform of clip art images. Lots of hidden features and learning curve. Best to use the program for what you want to do. I use it for graphic design and for plein-air painting and for playing around. For photos, it's a mediocre program. The controls are poor and there are no good solutions for basic camera characteristics. You'll often find yourself trying to extend the shadows and/or bump up the sharpening and the end result looks clunky, like a kid's coloring book. What would be nice is if the effects were given more control over the end result. The new Photoshop Elements education app makes it simple for students to launch the program, grab and start editing files and use features like a drawing tablet and touch screen. From the program's new Garage, you can choose a single file or several at once and export images and video directly to

e-mail, Facebook, YouTube and other sites. **Above**: The Evening Color palette in Photoshop. **Below**: The Sharpen panel's Blur mode for the Beauty Filter. Here, the slider controls the mixture of the sharp and blurred areas.
