Cracking Adobe Photoshop is a bit more involved than installing it. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

Foundry became responsible for managing Adobe's vast library of imagery and their new graphical user interface for the tool has some great features in common with Lightroom. The interface is clean, apparently minimalist, and I think we are going to like the new navigations and edits. For example, there is a Spin/Clip tool that lets you see every image in a folder without exposing the rest. Similarly, you can study a folder with thumbnails without opening those images. It even tells you how many images you have in the folder. It's a great tool for tidying up and organizing current and archived images in large productivity files, such as those handled by product libraries. Once you have navigated to the folder, all images in the library will be displayed, with up to nine images in each line. As you use the tool, the browser updates with every image that you open. While using this feature, you can also use the "Bar Chart View" to see a breakdown of the number of assets in every subcategory. Mine is as you can see in the gallery below. All folders have their own navigation buttons, and you can as easily add folders or images to a folder as you would with Lightroom. Finding your images is another feature of the Foundry Web Designer interface, which has a number of In and Out options that will match those same tools in Lightroom. For example, In includes the current image in a folder or directly edits all photos in a folder. Out includes all of the assets in a folder or those that exceed a certain criterion. I need to explore the specifics, but it seems fairly intuitive, for a relatively new product. The final In option lets you filter what's yours and what isn't based upon the other images in the photograph's current position.

The real estate market in the United States has been pretty stable over the last few years. Many people still have a hard time believing in this, especially when we talk with foreign investors and see the tens of billions of dollars flowing into U.S. homes. Then you go to an auction in California, an area that saw a two-year foreclosure rate of roughly one foreclosure per day, and start seeing things that are beyond anything that American residential real estate has ever seen or would ever even want to see. During the recent national election, I formed the opinion that the Democrats and Republicans were both the same. That is not to say that there are no differences between the two parties, but when it came to the market place and the real estate market, they were all on the same page. The only difference between what they believe is that the Republicans pretend to be for the working class while the Democrats pretend to be for everyone, even though they don't actually do anything for anyone as long as they keep their campaign coffers full. As of late, however, the Democrats feel that it is time to take a more clear stance. If you have been watching the news, you would have seen what has been going on in the housing market during the last few months. While the Republicans were happy to keep quiet and try to change the subject, the Democrats have been making it clear that something needs to be done. Yes, there has been a few years of high growth, but who really believes that we have reached the bottom? If the housing market was in the best shape it has ever been in, we wouldn't be seeing the number of foreclosures that we are seeing right now.

The market is different than it has ever been, and if a real estate investor isn't prepared for a complete shift of consumer behavior, they are going to be in for a bad time.
